

# Dunlop AGO/40 Optical Alignment Gauge

The Dunlop AGO/40 optical alignment gauges are **The** industry standard tracking gauges. This basic design has been in use since the mid-sixties with almost every garage and tyre shop having a set. They are still the quickest, method of accurately checking front or rear toe angles (Tracking). The gauges measure in fractions of a degree that can be converted, if preferred, to millimetres or inches using the calculator dial. Calibration is very simple and any user can do it in less than a minute.

The addition of the optional AGO/42 right angled mirror enables the checking of twin steering axles on commercial vehicles.
